# Stable-lyx<sup>®</sup>

## Equine Supplement

**Ensures daily intake of trace minerals and vitamins**

### Balanced Nutrition

- Protein, mineral and vitamin supplement all in one convenient product
- Elevated trace mineral and vitamins levels to guard against deficiency
- All plant-based sources of protein

### Enhanced Digestibility

- BIOPLEX<sup>®</sup> organic minerals offer higher bioavailability than inorganic minerals
- SEL-PLEX<sup>®</sup> organic selenium yeast is more digestible than inorganic forms
- Yea-Sacc<sup>®</sup> yeast culture enhances fiber-digesting bacteria, supporting fermentation of feeds and forages in the cecum

### Better Nutrition = Better Performance

- Enhanced mineral nutrition can help improve conception rates and allow mares to give birth to thriftier foals
- Added biotin helps improve hoof health and durability
- Proper mineral nutrition can help in exercise recovery and help horses deal with stress

### Controlled Intake

- Highly palatable to encourage consistent, daily intake
- Licking action required for consumption keeps bored horses occupied
- Block hardness naturally self-limits intake by preventing biting and chewing

**ClariFly**

Stable-lyx<sup>®</sup> is now available with ClariFly<sup>®</sup> for the prevention of emergence of house flies and stable flies from the manure of treated horses.

ClariFly<sup>®</sup> is a registered trademark of Welmark International.

CRYSTALYX<sup>®</sup> and Stable-lyx<sup>®</sup> are registered trademarks of Ridley USA Inc.

### How to Feed STABLE-LYX<sup>®</sup>

Stable-lyx<sup>®</sup> Brand Supplement is designed for self-feeding to all classes of equines.

Place containers in areas that achieve desired supplement intake. Provide one container for every three to 20 horses. A minimum of two containers may be necessary in each pen or pasture to assure consistent intake and proper accessibility.

To introduce or encourage intake with naive animals:

1. Place in areas where animals loaf or congregate
2. Remove cover and apply a handful of loose salt, grain, textured or pelleted feeds to the surface of the block
3. Or apply a small amount of water to the top of the block after scraping the surface

Equines will typically consume between 0.25 and 3.0 pounds per-horse, per-day. Self-fed consumption will depend on the size and age of the animal, the number of equines per container, as well as quality, source and availability of forage. Always provide free access to clean, fresh water.

**CAUTION:** Equines must be managed so that consumption of this block does not exceed three pounds per-head, per-day.

### TYPICAL NUTRIENT ANALYSIS

Crude Protein, min .....	12.0%	Copper, min .....	250 ppm
Crude Fat, min .....	5.0%	Iodine, min .....	8.8 ppm
Calcium, min .....	1.5%	Manganese, min .....	880 ppm
Calcium, max .....	2.0%	Selenium, min .....	0.7 ppm
